Polish Architects. Presentation of Polish Architectural Practices

We are presenting selected achievements of designed and executed projects developed by several leading Polish architectural and engineering offices who are interested in developing corporation outside Poland and Europe.

Fine architecture and functional solutions, attention to detail and quality of finishes are characteristic for Polish architects and engineers.

Experiences gained through the presented projects, meeting the highest European requirements and standards including the most advanced technologies in design and construction, are the best guarantee for cooperation.

Association of Polish Architects (SARP) patronizes this exhibition and presentations of achievements of selected Polish architectural practices, recommends them as solid and reliable partners for potential investors.

Mariusz Ścisło

President of the Board – Association
of Polish Architects (SARP)

Among others, good designs of Polish architects win awards and distinctions at World Expo's. At the same time, wide range of functions of these buildings (Expo buildings) proves their ability to solve even very complex and technologically advanced issues.

Buildings constructed in different parts of the Globe confirm the ability of Polish architects to properly read the context and cultural heritage of their locations.

Presented on the exhibition various thematically and differently expressive designs and examples of their execution confirm the ability of Polish architects to undertake each of the design tasks, with the prospect of good application in different economic and cultural conditions.

They proof the ability to safely entrust them with even the most complex design tasks they have to deliver to economic and image-building success.

Jerzy Grochulski

President of the Foundation for
Promotion of Architecture SARP

YACHT PARK GDYNIA

Location: Gdynia,
Hryniewickiego Street
Design&Construction: 2015-2018
Client: PHN S.A.

ZBIGNIEW RESZKA
MICHAŁ BARYŻEWSKI

Zbigniew Reszka and Michał Baryżewski began in 1989 common architectural activity founding joint firm ARCH-DECO. Reszka after co-foundation of cooperative "Architectural Works," Baryżewski after return from Fulbright scholarship in the USA, they brought with them different experiences. This diversification of professional experiences yielded in a dynamic development of a new firm and the stronger relationship of project with seaside surroundings in most ARCH-DECO realizations. This relationship deepened over the years and yielded projects more and more connected with sea and seashore. Pretext to the present publication is over 20 years of architectural experience of both partners of the ARCH-DECO firm and the presentation of selected realizations in respect of architectural prizes, foreign and national publications as well as received awards in competitions.

With constant technology race the ARCH-DECO office has a task to apply the most modern achievements in order to create modern architectural solutions with proper respect for location

and character of projected object. The intended result is a functioning object for present-day time with determined individuality, realized to the maximum in the framework of planned budget and realization period. As one of the first enterprises on our market with this profile.

ARCH-DECO began these kind of complex operations thanks to multiannual professional experience of two founders, one from USA and one from Poland. It was compliant with world tendencies, where the projecting office had a constant supervision over the quality of realized project and even from the smallest detail to the final inspections of the object. ARCH-DECO's multiannual experience is showing that such a complex services of investments gives to the customer the broadest supervision over the realized investment.

ARCH-DECO conducts projects based on latest architectural 3D programming, Revit, what allows to all major certificates. Like LEED, BREEM, and full project 3D management.

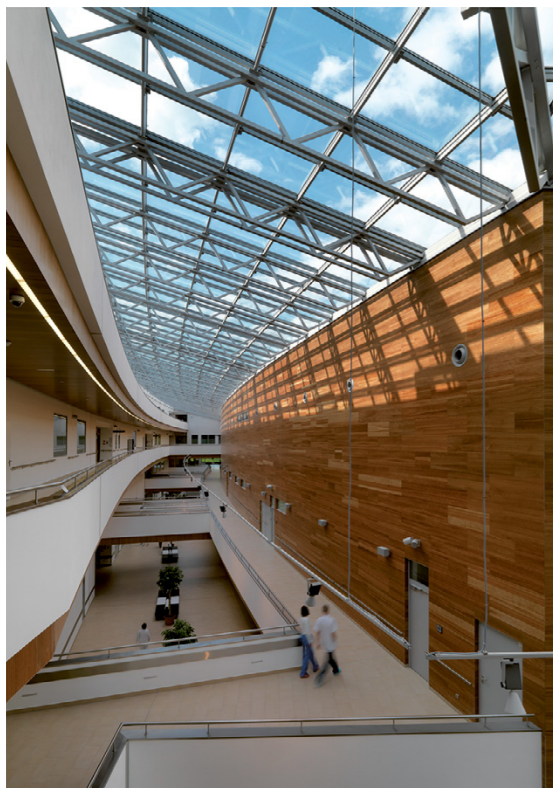

LOTOS HEADQUARTERS

Location: Gdańsk, Elbląska Street
Construction: 2006
Usable area: 4643
Client: GRUPA LOTOS S.A. – Oil Company
